

WEBSITE OVERVIEW & HOSTING ANALYSIS

FIRST CALL PLUMBING

From Demo to Live — Your Options Explained

Prepared for Joe & Gordon, First Call Plumbing

Date March 30, 2026

Website firstcallplumbingfl.com

OVERVIEW

WHAT'S BEEN BUILT

The demo I'm sending you is a fully designed, production-quality website for First Call Plumbing. It's built on modern web technology and is ready to go live whenever you decide to move forward.

The site covers everything a commercial plumbing contractor needs to make a strong first impression on general contractors, property managers, and developers:

- ✓ Full-page professional design with your navy & orange brand colors
- ✓ All 10 commercial plumbing services listed with descriptions
- ✓ Animated statistics (25+ years, 500+ projects, tri-county coverage)
- ✓ Owner profiles / About section telling the business story
- ✓ Customer testimonials carousel
- ✓ Visual service area map — Palm Beach, Broward & Miami-Dade
- ✓ Contact form with your phone, email, address, hours & license number
- ✓ Click-to-call button (works on mobile)
- ✓ Fully mobile responsive — looks great on any phone or tablet

One thing I need from you: Please review the 10 services listed and let me know if anything is missing, needs to be reworded, or should be removed. Also — Gordon, I need your last name to complete the About section before this goes public.

The main decision in front of you is simple: **do you want to start free and grow into paid features later, or invest in a working contact form and more tools from day one?** This document walks through both paths clearly.

OPTION A

START FREE — STATIC HOSTING

You can host this website for **\$0/month** on platforms like Vercel or Cloudflare Pages. The full site works beautifully — here's exactly what you get and what you don't.

What Works at No Cost

Feature	Status	Notes
Full site design & layout	✓ Works	All sections, animations, brand colors
Mobile responsive design	✓ Works	Looks great on any phone or tablet
Click-to-call button	✓ Works	Taps directly to dial on mobile
All 10 service listings	✓ Works	Cards, icons, descriptions
Service area map	✓ Works	Tri-county visual + Google Maps link
Owner profiles / About	✓ Works	Business story, credentials
Testimonials carousel	✓ Works	Interactive, swipeable
Custom domain (yoursite.com)	✓ Works	Free with any registrar (~\$12–\$15/year)
SSL / HTTPS security	✓ Works	Free & automatic
Contact form display	⚠ Partial	Form shows and validates — but see below

The One Critical Limitation

The contact form does not actually send you anything on a free static host. Right now the form shows a "Message Received" confirmation when submitted — but no email is ever sent and no data is stored anywhere. A potential client who fills out the form thinking they've contacted you will never hear back, because you never received their message.

This is fixable without building a backend. A free add-on service called **Web3Forms** (or similar) plugs directly into the existing form with about 10 lines of code. It emails you every submission with all the fields — name, company, phone, service type, project details — the moment someone hits Submit.

Form Service	Free Tier	Paid Tier
Web3Forms	250 submissions/month	\$9/month (unlimited)
Formspree	50 submissions/month	\$10/month (unlimited)
EmailJS	200 emails/month	\$15/month

Other Limitations on the Free Static Route

- ✗ **No appointment scheduling** — clients can't book an estimate online without a separate tool
- ✗ **No content updates without a developer** — changing a service description or adding a photo requires editing code and redeploying
- ✗ **No lead tracking** — no way to see all your inquiries in one place or track quote status
- ✗ **No automated follow-ups** — no email sequences to nurture PM contract leads
- ✗ **No customer portal** — clients can't check job status or invoice history online

Bottom line on free hosting: For a business where clients primarily call you, the free route gets a professional site live immediately. Add Web3Forms and the contact form works. You're not leaving money on the table — you're just not capturing every lead that prefers to fill out a form over calling.

OPTION B

PAID HOSTING & ADVANCED FEATURES

Adding a backend removes all static hosting limitations and turns the website from a digital business card into a lead-generation and business operations tool.

Feature Comparison

Feature	Free (Static)	With Backend
Contact form sends real emails	✗ No	✓ Yes
Auto-reply confirmation to customer	✗ No	✓ Yes
Appointment / estimate self-scheduling	⚠ 3rd-party only	✓ Custom or integrated
Lead tracking (quote status, win/loss)	✗ No	✓ Yes
Automated email follow-up sequences	✗ No	✓ Yes
Admin dashboard for all leads	✗ No	✓ Yes
PM contract lead funnel	✗ No	✓ Yes
Photo gallery managed without code	✗ No	✓ Yes
Customer job/invoice portal	✗ No	✓ Possible

What These Features Mean in Practice

Real contact form emails — Every inquiry lands in your inbox immediately with name, company, phone, email, service type, county, and project details. An auto-reply also goes to the customer confirming you received their message.

Estimate self-scheduling — Property managers and GCs can pick a date and time from your available slots without playing phone tag. Reminder emails go out automatically 24 hours before. You control available times from a simple admin panel.

PM contract lead funnel — A dedicated page for preventive maintenance contracts with an automated email sequence: Day 1 thank you, Day 3 case study, Day 7 call-to-action. Turns a form submission into a warmed-up lead.

Admin dashboard — See all inquiries in one place. Mark each one as "contacted," "quoted," "won," or "lost." Track which services drive the most leads. Export to a spreadsheet anytime.

Hosting Cost Reference

Scenario	Best Option	Monthly Cost
Launch fast, owners call all leads	Vercel Free + Web3Forms	\$0–\$9/month
Working form, no backend complexity	Netlify Pro (native forms)	\$19/month
Form + appointment scheduling	Vercel Free + Calendly	\$0–\$20/month
Full backend: form, lead tracking, admin	Render or Railway	\$15–\$30/month
Enterprise scale	AWS or DigitalOcean	\$20–\$50/month

RECOMMENDED PATH

HOW TO MOVE FORWARD

There's no commitment required right now. Here's a logical progression that starts at zero cost and grows as the business decides it's worth investing further.

PHASE 1

Launch Now

Deploy the site on **Vercel** (free) with your existing domain (firstcallplumbingfl.com). Add **Web3Forms** to make the contact form actually send you emails. Site is live, professional, and capturing leads within days.

Domain registration if needed: ~\$12–\$15/year through Namecheap or Cloudflare.

\$0/month

PHASE 2

Lead Optimization (Month 2–3)

Upgrade to a proper email backend. Add a **Calendly** embed for estimate self-scheduling. This directly converts more website visitors into booked appointments without requiring a phone call.

~\$20/month

PHASE 3

Business Operations (Month 6+)

Build a lightweight **admin dashboard** to track all leads from first contact to closed job. Add PM contract lead funnel and automated follow-up emails. The site becomes an operations tool, not just marketing.

~\$30/month

Need an Exact Cost Estimate?

If you decide you want specific features — say, a working contact form plus appointment scheduling plus lead tracking — I can run detailed cost modeling and simulations to get you a precise dollar figure for both development and monthly hosting before you commit to anything. No guessing, no surprises. Just let me know which features interest you and I'll put together a full breakdown.

Next Steps

1. Review the demo screenshots and let me know your feedback on the design
2. Confirm or correct the 10 services listed on the site
3. Gordon — provide your last name for the About section
4. Decide if you want to start free or jump straight to a working contact form
